REF 3079 · Excluded from TGA regulation — ARTG inclusion not required

ALPRO-AU-SUM-BIOTESTERS · Version 1.0 · Issue September 2026 · Next review October 2027

Purpose

Quick Microbial Count Indicator — bacteria presence indicator designed for rapid microbial monitoring of dental unit waterlines (DUWLs).

Key features

- Designed for **rapid microbial monitoring of dental unit waterlines (DUWLs)**.
- Provides a **visual indication of bacterial contamination** and helps assess whether the required water-quality level of **<200 CFU/mL** is being maintained.
- The nutrient **agar supports the growth of viable microorganisms**, allowing colonies to become visible for comparison and approximate microbial counting.
- Provides an **easy visual representation of microbial load** without specialised equipment.
- Ideal for **routine quarterly water-quality monitoring** as part of the dental practice's infection-control program.
- **Screening tool only** — provides an indicative microbial count and does not replace formal laboratory testing when laboratory analysis is required.
