PRODUCT SUMMARY

CleanWipes

Cleaning of Medical Device Surfaces

Class I Medical Device - Ready-to-Use Near-Neutral Detergent Wipes

REF 4153 · dispenser box with 70 wipes · REF 4154 · carton of 12 refill bags · ARTG 282859

ALPRO-AU-SUM-CLEANWIPES · Version 1.1 · Updated October 2026

Gentle on sensitive surfaces. Tough on organic contamination.

Purpose

CleanWipes are ready-to-use, near-neutral detergent wipes for cleaning sensitive medical-device surfaces and dental equipment. They help dissolve and remove organic contamination, including blood, protein and tissue residues, while offering excellent material compatibility and minimal residue concerns.

The non-protein-fixing formulation helps lift contamination before it dries onto the surface, reduces microbial contamination and prepares the medical-device surface for effective subsequent disinfection where required.

Endorsed and recommended by many leading global manufacturers of dental equipment. Aligned with ADA infection-control cleaning principles, Fifth Edition, amended 2026.

Key features

- **Effective medical-device surface cleaning.**
  Designed for sensitive dental and medical-device surfaces, helping remove blood, proteins, tissue residues and general organic contamination before subsequent disinfection where required.
- **Non-protein-fixing cleaning action.**
  Helps dissolve and lift protein contamination rather than fixing it onto the surface, supporting more effective downstream disinfection.
- **Near-neutral, alcohol-free formulation.**
  Gentle on sensitive equipment and suitable where material compatibility is important.
- **Bacteriostatic and fungistatic.**
  Provides microbial growth-inhibiting activity as part of its medical-device cleaning function. CleanWipes are a cleaner, not a bactericidal or virucidal disinfectant.
- **Large wipe size - 21 x 26 cm.**
  Generous dimensions provide greater surface coverage per wipe.
- **Viscose microfibre for excellent solution absorption.**
  Soft cotton-touch viscose microfibre provides strong liquid uptake and even distribution of the cleaning solution across the device surface.
- **More environmentally compatible wipe material.**
  Viscose fibre offers a more environmentally compatible option than many generic polyester wipes commonly available on the market.
- **Excellent material compatibility.**
  Designed for delicate medical-device and dental-equipment surfaces and recommended by leading global dental equipment manufacturers.

> **Cleaner, not disinfectant**
>
> CleanWipes are intended for cleaning and decontamination of medical-device surfaces. Where disinfection is required, follow with an appropriate compatible medical-device disinfectant.
